Ridham Sonani

rsonani@asu.edu | +1 623-313-5013 | linkedin.com/in/ridham-sonani

Summary

Software engineer with 2+ years of experience building full-stack web applications and backend services using Python, JavaScript, and Java. Proficient in designing REST APIs, optimizing database performance, and delivering end-to-end features from requirements through production with a focus on code quality and system reliability.

Education

Arizona State University Aug 2024 – May 2026
Master's, Computer Science | GPA: 3.77/4.0

Dhirubhai Ambani Institute of Information and Communication Technology Aug 2019 – Jun 2023
BTech, Information and Communication Technology

- **Coursework:** Data Structures and Algorithms, Operating Systems, Database Management Systems, Software Engineering, Cloud Computing

Skills

Languages: Python, JavaScript, TypeScript, Java, C++, C, SQL
Web Development: React.js, Next.js, Node.js, Express.js, REST APIs, Spring Boot, HTML5, CSS3, Material UI
Cloud & DevOps: AWS (Lambda, S3, API Gateway, EC2, Bedrock, CDK), Docker, Git, CI/CD Pipelines
Databases: PostgreSQL, MySQL, DynamoDB
Tools: GitHub, Linux, Postman, Jira
Areas of Expertise: Full-Stack Development, REST API Design, Object-Oriented Programming, Data Structures & Algorithms, SDLC

Experience

Associate Cloud Developer, AWS Cloud Innovation Center – *Tempe, AZ* Jan 2025 – May 2026

- Designed and deployed cloud-native features using Lambda and API Gateway for applications serving 1,000+ users, owning full lifecycle from requirements through production.
- Developed Python REST APIs with structured logging and monitoring, automating incident response for improved system reliability.
- Integrated Generative AI services (Bedrock, Q Business) into customer-facing products, enabling intelligent document processing and natural language search.

Full Stack Developer, Escrow Infotech – *Surat, India* Jan 2024 – Jul 2024

- Developed and optimized Python/Node.js backend APIs, reducing response latency from 450ms to 300ms for 500+ daily users.
- Enhanced PostgreSQL performance through indexing strategies and query tuning, cutting heavy query execution times by 35
- Crafted responsive UIs using HTML5, CSS3, and JavaScript, improving page load times by 20% and reducing UI-related support tickets.

Software Development Engineer Intern, Amazon – *Bangalore, India* Jan 2023 – Jun 2023

- Launched QA Metrics Portal automating test execution and defect metrics collection, saving program managers 8–10 hours weekly.
- Automated 200+ test cases on Echo devices using Python test runner simulating voice commands and UI validation, reducing testing effort by 70%.
- Developed Python test framework with reusable modules for voice command simulation and UI state verification, improving test reliability.

Projects

Tourist Agencies Management System Aug 2021 – Nov 2021

- Designed normalized PostgreSQL schema with 15+ entities, foreign keys, triggers, and stored procedures automating billing and cancellation workflows.
- Built Node.js/Express REST API layer exposing database operations to a React frontend for tour, booking, and customer management.
- Implemented 40+ analytical SQL queries using CTEs, joins, and aggregations for business reporting and operational insights.

Technologies: React.js, Node.js, Express.js, PostgreSQL, SQL, PL/pgSQL, Docker, GitHub

AI Assistant Platform Mar 2025 – May 2025

- Shipped full-stack AI chatbot with React/Material-UI frontend and Python/Lambda backend, integrating Amazon Q Business for natural language search over indexed web and document content.
- Implemented source-attributed responses with clickable citations, grounding LLM outputs in indexed knowledge base content.
- Automated deployment using AWS CDK and CodeBuild CI/CD, reducing provisioning to a single command.

Technologies: React, TypeScript, Python, AWS (Lambda, S3, Q Business, Amplify, API Gateway), AWS CDK, Material-UI
